The Honorable Andrea Salinas
PO Box 230985
Tigard, Or97281

Dear Congresswoman Salinas,

I hope this message finds you well. I am writing to you as a concerned constituent regarding an important issue related to the environmental management of Detroit Lake in Oregon. Specifically, I am seeking your support in obtaining critical information from the Army Corps of Engineers concerning the earthquake data that led to changes in the full pool level of Detroit Lake.

As you may know, Detroit Lake is a vital resource for our community, serving both recreational and ecological purposes. Recent shifts in its full pool level have raised concerns among residents and local stakeholders. In order to understand the underlying factors contributing to these changes, particularly in light of seismic activity, it is imperative that we have access to comprehensive data and analyses from the Army Corps of Engineers.

I kindly request your assistance in reaching out to the Army Corps of Engineers to facilitate the release of relevant documents and data that detail the earthquake activity impacting Detroit Lake and any studies conducted regarding its effect on water levels. Transparency in this matter is crucial for the community to adequately prepare for potential impacts and to ensure that our natural resources are managed sustainably.

Thank you for your attention to this matter and for your continued service and support for our community. I believe that with your help, we can ensure that important information is made available, fostering a more informed and prepared community.

Sincerely,

Denny Nielsen, Councilor, City of Detroit
Commissioner, Rebuilding of the city business district
